Website Goal

The technological evolution made everything digital including learning, Takke as a website that offers paid sound engineering courses, and it offers a special learning experience for beginner and professional sound engineers. But before starting designing and developing the website we must to know what is the purpose of the website, goals of the website, users of the website, and user needs.

First let's discuss who is the website Takke for? Takke is designed for aspiring, and passionate sound engineers who are looking to upgrade their skills and for aspiring people who wants to be sound engineers. Our users shares a common aspect which is learning and innovation in the field of sound engineering.

We also must discuss a crucial aspect which is what users expect to find on Takke website. Users does not only browse, but they will look on their learning trip in the sound engineering field. Users expect from the website a:

- Courses: A detailed paid courses with a good price and cover 90% of sound engineering aspects.
- Guidance: A expert guidance through connecting with the instructor linkedIn profile and sending him emails.
- Ease of access: a design that works well on every device, and easy registration and buying process.
- User Friendly website: clear and clean layout that attract users to see.

A point that it is worth mentioning is the aim of the website. Takke is a website that offers paid service which is sound engineering courses that has a primary goal which is give users a comprehensive knowledge and high skills that not is popular because and there aren't many websites that offers sound engineering courses.

All of Takke goals:

- Deliver a high-quality course.
- Enable students to master the sound engineering by taking knowledge and enhance their skills.
- A unique resource in a field that doesn't have many resources for.

Scope

The scope of Takke shows the scenarios, areas that Takke will cover, and what the finished website will be used for. Takke offers a paid sound engineering courses that focuses on giving the users a unique learning journey.

Takke will include a paid courses, guidance, ease of access, and user-friendly layout. Takke provides educational services for all students levels, it also provides video tutorials and resources. Takke will cover an easy registration process and the website must work well on all devices. Also, the website is specified for sound engineers and for the people who wants to be sound engineers.
Now let's discuss what the finished website will be used for. Once the website is done developing, Takke will be a specialized website for delivering a high quality sound engineering courses and it will help users to gain sound engineering knowledge and skills, give an engaged learning environment, and be a unique resources in the sound engineering field.

Requirements

Requirement 1: User Account Management

A requirement that wants me to create a website that involves account management features such as sign in, sign up, sign out.

- Sign Un: the users can create account and stores it in the database.
- Sign In: the users will start a session and log in to their account.
- Sign Out: the user will terminate the session and clears session data.

Requirement 2: Dynamic Webpages

A requirement that wants me to create a website with a 5-6 web pages that have a connection with the data base, the website will:

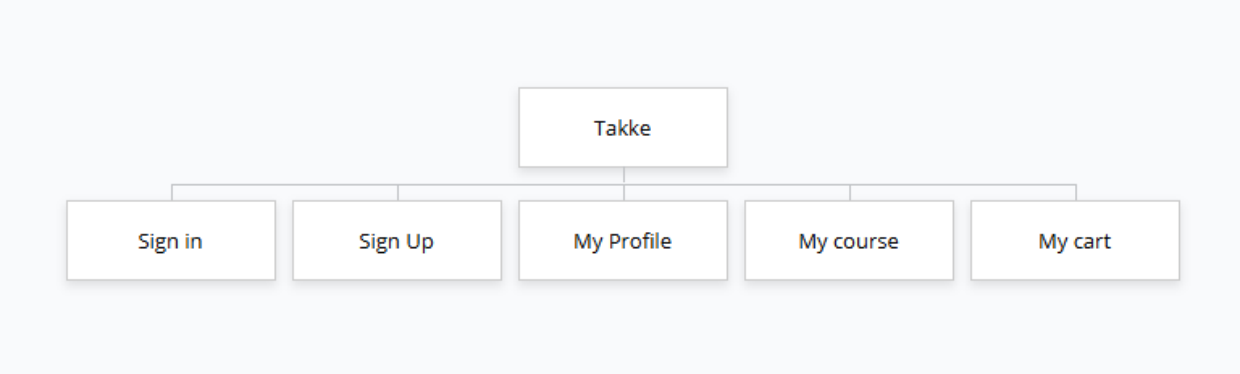

- Read courses from the data base, and reads cart from the database.
- Insert courses from the website to the cart table in the database.
- Update user information from the website in the database.
- Delete course from the cart page and cart table in the database.

Requirement 3: Responsiveness Design

A requirement that wants me to create a website that is suitable for all devices such as mobile phones, laptops, tablets, pc's, etc.

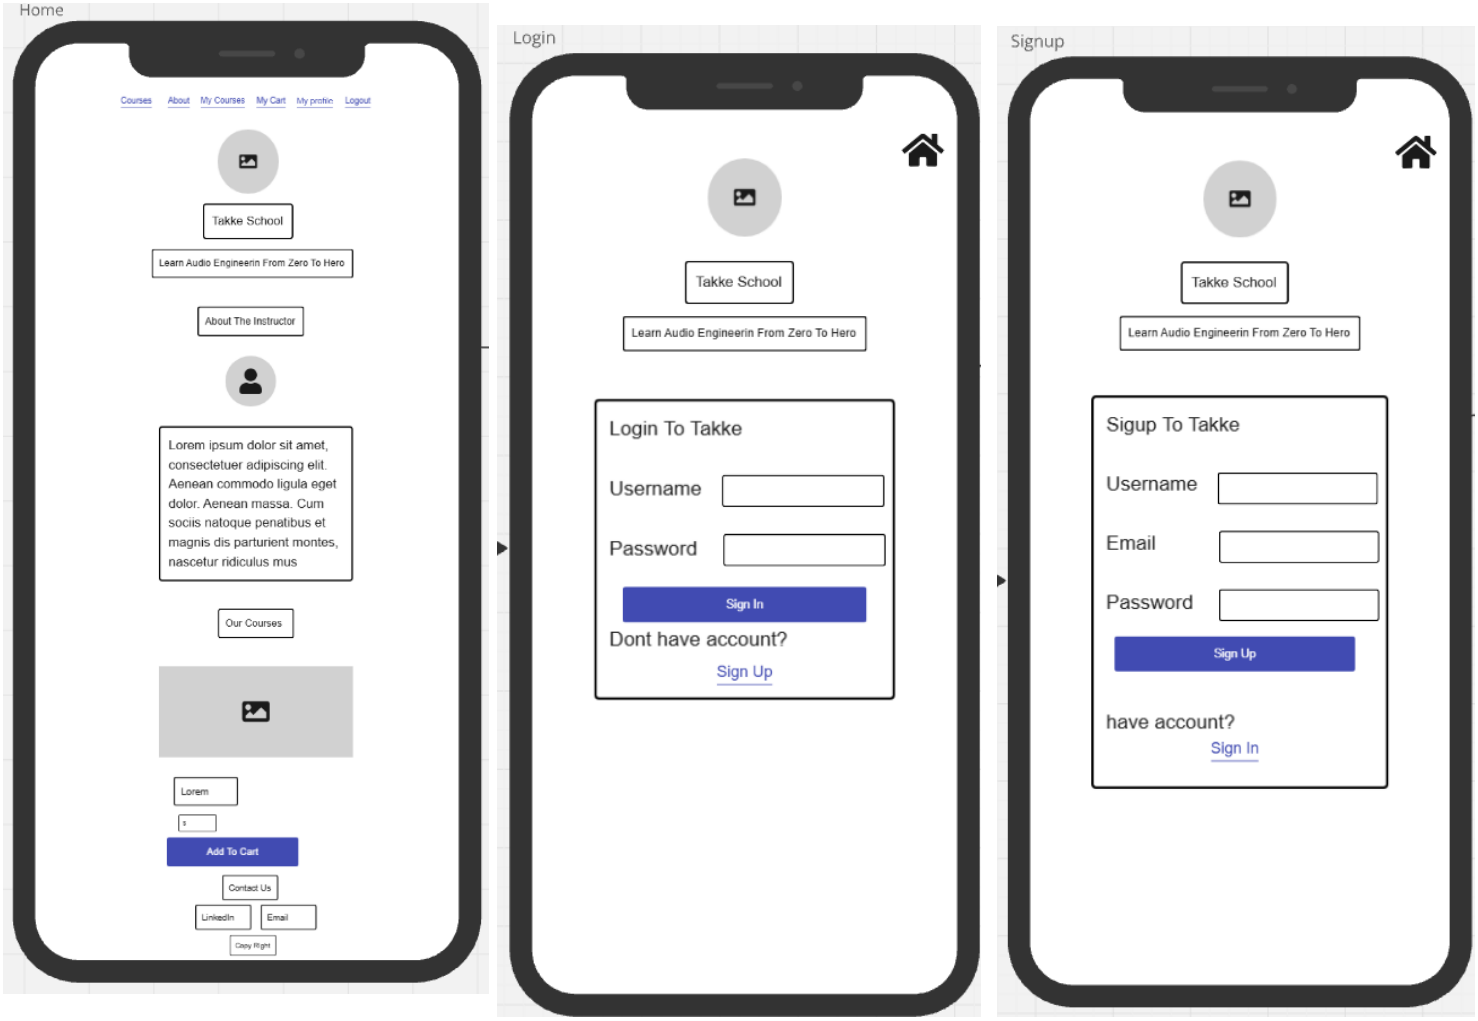

- Use flex in my css to display the components.
- Use css media queries to ensure that the design is compatible with different device's screen sizes.
